

FIRECEL

The Last Cable Standing

SR 114H | SR 114E

Fire Resistant Cables for Fire Alarm Systems, Fire Detection and Emergency Lighting

According to **BS 5839-1:2013** "Fire detection and fire alarm systems for buildings — Part 1: Code of practice for system design, installation, commissioning and maintenance", two different levels of cable fire resistance are specified.

For most application "standard" fire resistant cables can be used. However, for other applications, such as unsprinklered premises or buildings, in which the designer or specifier require an improved fire resistance, "enhanced" cables must be used.

Enhanced cables meet the most severe fire tests as they survive fire at the highest temperature of **930 °C**, with water and mechanical shocks for **120 min**.

| Basic Design | BS 7629:2015 | | | | | | | |

BS 5839-1 recommends "enhanced" fire resistant cables for the following applications:

- in unsprinklered buildings (or parts of buildings) in which the fire strategy involves evacuation of occupants in four or more phases;
- in unsprinklered buildings of greater than 30 m in height;
- in unsprinklered premises and sites in which a fire in one area could affect cables of critical signal paths associated with areas remote from fire, in which it is envisaged people will remain in occupation during the course of the fire;
- in any other buildings in which the designer, specifier or regulatory authority, on the basis of a fire risk assessment that takes fire engineering considerations into account, considers that the use of enhanced fire resisting cables is necessary.

BS 8519:2010 "Selection and installation of fire-resistant power and control cable systems for life safety and fire-fighting application"

- Category 1 30 minutes survival time: Tested to EN 50200 PH 30 + Annex E as per requirements for "standard" control cables.
- Category 2 60 minutes survival time: Tested to EN 50200 PH 60 + BS 8434-2 as per requirements for "enhanced" control cables.
- Category 3 120 minutes survival time: Tested to EN 50200 PH 120 + BS 8491 as per requirements for "enhanced" control cables.

BS 8519 does not cover the wiring of fire detection and fire alarm systems which are still covered by the BS 5839-1, BS 5839-8 and BS 5839-9 and emergency lighting systems which are still covered by the BS 5266-1.

For more information we recommend to consult BS 5839-1 Par.26 and BS 8519:2010 and BS 8491.

FEATURES AND ADVANTAGES

Flexible

Very flexible construction that makes the installation easier in all conditions.

LSZH (Low Smoke Zero Halogen)

Combustion gases with very low toxicity, low smoke emission, and no corrosive gas, for the safeguard of human life and electronic equipment.

Flame retardant

Limiting the spread of the fire along the cable run, flame barriers can be avoided or reduced.

Protected against electrostatic noise

Cable is fully screened and conductors are twisted.

Moisture resistant

No special terminals are required to prevent moisture absorption. It can be installed in damp environments

Suitable for data transmission

Twisting of conductors make the cable suitable for clear data transmission.

Low cost installation

Neither special tools, nor special training are neccessary. A cheap and effective cable stripper is available on request to simplify installation.

Easy to handle.

Quality Assurance
In order to satisfy QA requirements,
traceability is assured by batch number
printed on outer jacket.

All drums are delivered with our internal TEST REPORT that can be seen or download through QR Code on top right of the label.

APPLICATIONS

- Hotels
- Theatres and cinemas
- Museums
- Hospitals
- Shopping centres
- Offices
- Schools
- Airports
- Undergrounds and tunnels
- Railway stations
- High-rise buildings
- Data communication centres
- Public address systems
- Traffic control systems
- Fire fighting systems

APPLICATIONS

FIRECEL SR 114H are primarily intended for general application. Typical applications are:

BS 5839-1 for standard fire resistant cables in fire detection and fire alarm systems for building

BS 5839-8 for voice alarm systems

BS 5839-9 for emergency voice communication systems.

BS 5266-1 for emergency lighting of premises (PH60)

BS 8519 for fire-resistant control cable systems for life safety and firefighting application - Category 1

OPERATING TEMPERATURE

-40°C to +90°C

Armouring

FIRECEL cables can be supplied with:

| SWA | Steel Wire Armour | SWB | Steel Wire Braid |
|-----|-------------------|-----|------------------|
| | | 3 | |

Cable Installation

Ambient Temperature

FIRECEL cables are easy to install also at temperature as low as $-10\ ^{\circ}\text{C}.$

Storage temperature: -40 °C to +80 °C.

Bending Radius

Minimum 6 times the nominal diameter of the cable.

Installation

Cable is easy to handle and easy to install without special tools

Cable can be fixed directly to a surface using LSZH coated copper P clips or Saddle clips, available together with cables. Plastic clips must not be used.

Cable can also be installed in cable tray or in conduits, or direct buried in plaster.

Suitable for outdoor installation too, in appropriate protected environments.

Glands

For standard installation, general purpose nylon glands can be used.

In explosion proof area suitable proof glands can be used with armoured cables.

Available colours: white/red.

Our commitment to environmentally friendly products.

CAVICEL is committed to providing our customers with environmentally friendly products in compliance with the European Union (EU) RoHS Directive (Restriction of Hazardous Substances) and REACH Regulation (Registration, Evaluation, Authorization and Restriction of Chemicals).
